

Solution Sheet

Point-of-Sales (POS) Managed Services

The Challenge

Majority of the Point-of-Sales (POS) ecosystem operate more **out** of the corporate physical and network boundaries compared to their traditional counterparts — which leaves them exposed to threats. Attackers and cyber criminals have also determined that endpoints have become more vulnerable targets, and have started focusing their attention on endpoint applications. IT today lacks real-time information from these endpoints in order to be able to discover critical security, compliance and configuration issues quickly.

This can lead to:

Larger security issues across the broader IT setup than just the endpoints

Time-consuming efforts of hours and even days to do routine health-checks

Financial losses due to data breach

Costly delays in identifying the precise location and scope of an ongoing attack

Lack of visibility on how far the incident has spread and how deep a penetration has occurred

Solution — Persistent Point-of-Sales (POS) Managed Services for Timely and Quick Actions

Identifying a problem is often the hardest part of fixing it

Persistent Point-of-Sales (POS) Managed Services pulls together real-time information from enterprise endpoints for IT administrators to quickly identify critical security threats and vulnerabilities, and address compliance and configuration issues in their network within minutes. It allows administrators to proactively query the current status and existence / non-existence of configurations and files from the point of view

of actively unearthing issues in real-time. It classifies and presents the information gathered in visual format with drilldown information, and makes it easy for IT to locate problem areas in their network of endpoints quickly. The search queries in the solution are in freeform text format, which enables IT to easily query their endpoints using natural language phrases.

Persistent Point-of-Sales (POS) Managed Services Solution Components

It consists of components that enable easy querying, visual representation and quick response to Point-of-Sales (POS) information.

Up to date information straight from the source: It gets real-time information directly from endpoints within seconds, and not from a cache that is outdated with data that is hours or days old.

Natural language query processing: It is equipped with entity-based natural language processing, which emphasizes key entities of interest to IT such as software, file, version, patch, CPU, memory, and so on. This enables administrators to type in their query as free form text and search through their critical assets and entities easily.

Dynamic graphical representation: It provides dynamic and real-time graphs as query outcomes, which administrators can slice and dice in different ways, and filter them by subnets, platform types and operating systems. The visual representation provides an immediate view of the health of the organization's network of endpoints. The entire dashboard is clickable to provide easy drill downs into various points of interest.

In-place remediation: It provides the option to integrate with Point-of-Sales (POS) management tools to do in-place remediation of endpoints: Kill rogue processes, delete files, install patches and apply updates in minutes.

Fast querying and action for maximum reliability: The queries are run in real-time, and are quick for administrators to be nimble and responsive to changing endpoint dynamics. For example, administrators can apply the latest patch on non-compliant endpoints and quickly check the updated status to ensure that all endpoints are compliant and secure.

Scalability and reliability that is tested for hundreds of thousands of endpoints: It has been scale-tested with hundreds of thousands endpoints. The design of the solution along with small footprint, and low bandwidth usage ensures that it can respond to critical administrator queries in a matter of seconds — not hours and days.

Persistent Point-of-Sales (POS) Managed Services Benefits

Mitigates risks considerably with real-time and instant check on status and health of Point-of-Sales (POS) across the corporate network.

Reduces security incidents caused due to vulnerable endpoints running older patches, rogue software, processes, etc.

Provides **better control** and improves **decision-making** based on precise and real-time information with deep Point-of-Sales (POS) insights.

Provides **real-time** and **dynamic graphs** to view status, and act on them quickly.

Significantly **reduces operational costs** with proactive and targeted Point-of-Sales (POS) management.

About Persistent

With over 23,000 employees located in 21 countries, Persistent Systems (BSE & NSE: PERSISTENT) is a global services and solutions company delivering Digital Engineering and Enterprise Modernization. We work with the industry leaders including 14 of the 30 most innovative companies as identified by BCG, 8 of the top 10 largest banks in the US and India, and numerous innovators across the healthcare and software ecosystems. As a participant of the United Nations Global Compact, Persistent is committed to aligning strategies and operations with universal principles on human rights, labour, environment, and anti-corruption, as well as take actions that advance societal goals.

USA

Persistent Systems, Inc.
2055 Laurelwood Road, Suite 210
Santa Clara, CA 95054
